

Visualized daily deaths' estimates restricted to less than 5 times of maximum reported by JOHN

The graph displays the daily death toll from COVID-19 in the UK. The Y-axis, labeled 'Daily deaths', ranges from 0 to 5,000. The X-axis, labeled 'Date', spans from 20-01-01 to 23-01-01. A thick cyan line shows the daily death toll, which remains near zero until early 2020, then rises sharply to a peak of approximately 1,000 in early 2020. It then fluctuates, with major peaks in early 2021 (reaching nearly 5,000) and early 2022 (reaching nearly 4,000). Numerous thinner lines in various colors represent individual daily death counts, showing the high variability and volatility of the data. The graph illustrates the impact of the pandemic on the UK's population over time.
